

Understanding Climate Change

With record-breaking heat in the summer, mild winter temperatures, and extreme storm events— it is evident that, globally, we are experiencing a change in climate. Six Nations Elected Council Environment Department has collaborated with **Ontario Centre for Climate Impacts and Adaptation Resources (OCCIAR)** to develop a strategy for a *Six Nations Climate Change Adaptation Plan*. One of the main components of the plan is to gather **local-community knowledge** to document the changes community members have noticed locally in the environment. The purpose of Adaptation is to reduce the risks of climate change in the community and the natural environment.

For more information and community knowledge please feel free to visit the Climate Change survey at:
